Weekly Lesson Plan – Week 5 · Semester 1 · 2026–27 · Da Vinci School

Teacher: Gavaldon | Week of: Sept 8, 2026 | Course: Manufacturing Engineering Technology I

TEKS / ELPS:

TEKS: §127.813(d)(2) programmable logic concepts; 127.15(d)(1) communicate technical work; §127.813(d)(2) writing programmable logic - sequence, condition, and control concepts; §127.813(d)(2)(A) use programmed instructions to make a process run in the correct order
ELPS: c.1C, c.2C, c.3E, c.4C, c.4F, c.5G

Aim of the Lesson / Objective: *Statement of what you want students to do (skill) and/or know (knowledge). Students will…*

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY
Students will correct every missed quiz item and explain, in their own words, why the correct answer is correct.	Students will call built-in string methods to read individual characters, search inside text, and slice pieces out of it.	Students will combine string methods in a guided build to produce a working program and identify its input, process, and output.	Students will apply string formatting methods and read error messages to correct a method call.	

Employed Language Domain(s) Objective: *How students achieve the objective – Listening, Speaking, Reading, Writing. Students will…*

Students will collaborate in teams to investigate engineering problems, communicate their findings, and present their solutions. They will listen to team members' ideas, discuss potential solutions, read relevant technical materials, and write explanations of their designs and findings.

Assessment of Content Objective: *Instrument used to determine mastery. Ex: Exit Ticket.*

Students will be assessed by written, group, or oral responses throughout the class period.

Set (Bell Work): *A motivating action that engages students in the objective – question, fact, activity. Essential Question:*

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY
What are today's key ideas in: Quiz Review: Corrections and Explanations?	AI can now write working code from a plain-English description. Does that make learning to code pointless, or more important?	Should a company have to tell you when AI - not a person - made a decision about you? A job application, a loan, a grade.	AI is trained on work people made - art, writing, code - without asking them. Is that fair?	

Methodology / Steps: *What it takes to teach the objective so 100% can pass the assessment. Teacher will… Teams will… Individuals will…*

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY
Step 1: Bell ringer / essential question. Step 2: How today works: copy the answer AND the reason (5 min) Step 3: Walk every question: correct answer, why it is right, what you thought instead (30 min) Step 4: The patterns behind the misses: counting from zero, case sensitivity, skimming (5 min) Step 5: Notebook check: corrections turned in (5 min)	Step 1: Bell ringer / essential question. Step 2: Bell work: must a company tell you when AI made a decision about you? (10 min) Step 3: A method is a built-in action - the dot and the parentheses (8 min) Step 4: Counting starts at zero: charAt(0) is the first character (5 min) Step 5: Working with String Character Methods, then Search and Slice Methods (17 min) Step 6: Post the daily freeCodeCamp screenshot (5 min)	Step 1: Bell ringer / essential question. Step 2: Bell work: AI trained on people's work without asking - is that fair? (10 min) Step 3: What you are building: text in, a report about it out (6 min) Step 4: The stuck protocol (4 min) Step 5: Workshop: Build a String Inspector - type every line (20 min) Step 6: Post the daily freeCodeCamp screenshot (5 min)	Step 1: Bell ringer / essential question. Step 2: Bell work: what job do you want that AI will not be able to do? (10 min) Step 3: Formatting: trim, capitalization, padding so columns line up (7 min) Step 4: Reading errors: not a function, not defined, case sensitivity (5 min) Step 5: Working with String Formatting Methods, then Build a String Formatter (13 min) Step 6: Account check - I verify every progress page (5 min) Step 7: Post the daily freeCodeCamp screenshot (5 min)	

Resources: *Textbook, handouts, visuals, laptops.*

Google Classroom, projector, engineering notebook, Design Brief packet / worksheets, laptops or phones for AI tools.

Re-Teaching Activities: *What you prepare if students do not master the objective.*

Review during bellwork; small-group re-teach at the teacher table; one-on-one explanation on request; peer and native-language support within the seating group.

Reflection: *Students analyze what they accomplished and how they reached mastery.*

Exit ticket – students state what they accomplished and what worked best.

Study Skills: *Skills implemented by students – note-taking, summarizing, teamwork, etc.*

Note-taking, summarizing, outlining, reading comprehension, teamwork, oral communication, problem-solving.

SPED & 504 Accommodations / Modifications: *Codes.*

Per Individualized Education Plan (IEP) / 504 plan.

ELL Accommodations: *Codes.*

Clarify directions (CD); Extra time (ET); Peer and Native Language Support (PN); Pre-teach vocabulary (PV); Rephrase, Repeat, Slow Down (RS); Visual Cues (VC); Wait time (WT); Pictorial Representation (DP). GROUPING: students are seated in mixed-proficiency small groups so emergent bilingual students hear and use the academic vocabulary in context, rehearse with a peer before whole-class response, and can be pulled as a small group for re-teach (PN, WT). ONE-ON-ONE: individual teacher explanation is available on request every period; directions are restated and modeled individually at the student desk after whole-class delivery (CD, RS, VC).
