Weekly Lesson Plan – Week 4 · Semester 1 · 2026–27 · Da Vinci School

Teacher: Gavaldon | Week of: Aug 31, 2026 | Course: Manufacturing Engineering Technology I

TEKS / ELPS:

```
TEKS: §127.813(d)(1) software skills applied to manufacturing - set up and navigate a software environment; §127.813(d)(2) writing programmable logic - sequence, condition, and control concepts; §127.813(d)(2)(A) use programmed instructions to make a process run in the correct order; §127.813(d)(2) programmable logic concepts; 127.15(d)(1) communicate technical work
ELPS: c.1C, c.2C, c.3E, c.4C, c.4F, c.5G
```

Aim of the Lesson / Objective: *Statement of what you want students to do (skill) and/or know (knowledge). Students will…*

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY
Students will create a freeCodeCamp account with their school credentials and navigate to the correct course.	Students will define a variable and explain how a value is stored and reused in a program.	Students will complete the first course item and explain what a string is and how strings are joined.	Students will use strings correctly, including quoting and joining, and read an error message to find their mistake.	Students will complete course items 1 and 2 and explain the week's key terms in their own words.

Employed Language Domain(s) Objective: *How students achieve the objective – Listening, Speaking, Reading, Writing. Students will…*

Students will collaborate in teams to investigate engineering problems, communicate their findings, and present their solutions. They will listen to team members' ideas, discuss potential solutions, read relevant technical materials, and write explanations of their designs and findings.

Assessment of Content Objective: *Instrument used to determine mastery. Ex: Exit Ticket.*

Students will be assessed by written, group, or oral responses throughout the class period.

Set (Bell Work): *A motivating action that engages students in the objective – question, fact, activity. Essential Question:*

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY
Where is the line between using AI and cheating on your own work?	If AI can already do the entry-level version of a job, should companies still hire people to learn it?	An AI system makes a mistake and a real person gets hurt. Who is responsible - the person who used it, the company that built it, or nobody?	Should an AI have to tell you it is an AI when it talks to you?	Name one decision AI should never be allowed to make on its own. Defend it.

Methodology / Steps: *What it takes to teach the objective so 100% can pass the assessment. Teacher will… Teams will… Individuals will…*

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY
Step 1: Bell ringer / essential question. Step 2: Bell work: where is the line between using AI and cheating? (10 min) Step 3: What freeCodeCamp is and why we start here (6 min) Step 4: Account setup, six steps, rolling by row (16 min) Step 5: Find the course: Full Stack Developer -> JavaScript -> Variables and Strings (8 min) Step 6: Post the daily freeCodeCamp screenshot (5 min)	Step 1: Bell ringer / essential question. Step 2: Bell work: should companies still hire people for jobs AI can do? (10 min) Step 3: A variable is a labeled box + platform rules (8 min) Step 4: The stuck protocol (5 min) Step 5: Work item 1: Introduction to JavaScript (17 min) Step 6: Post the daily freeCodeCamp screenshot (5 min)	Step 1: Bell ringer / essential question. Step 2: Bell work: an AI hurts someone - who is responsible? (10 min) Step 3: Self-check: can you declare a variable without looking? (5 min) Step 4: Finish item 1, then start item 2: Introduction to Strings (22 min) Step 5: Word wall: string, value, join (3 min) Step 6: Post the daily freeCodeCamp screenshot (5 min)	Step 1: Bell ringer / essential question. Step 2: Bell work: should an AI have to tell you it is an AI? (10 min) Step 3: Strings are text with rules: quotes, plus, spaces (7 min) Step 4: Work item 2: Introduction to Strings (23 min) Step 5: Post the daily freeCodeCamp screenshot (5 min)	Step 1: Bell ringer / essential question. Step 2: Bell work: one decision AI should never make on its own (10 min) Step 3: Catch up: finish items 1 and 2 (18 min) Step 4: Vocabulary: variable, string, declare, value (7 min) Step 5: Account check - I verify every progress page (5 min) Step 6: Post the daily freeCodeCamp screenshot (5 min)

Resources: *Textbook, handouts, visuals, laptops.*

Google Classroom, projector, engineering notebook, Design Brief packet / worksheets, laptops or phones for AI tools.

Re-Teaching Activities: *What you prepare if students do not master the objective.*

Review during bellwork; small-group re-teach; peer support.

Reflection: *Students analyze what they accomplished and how they reached mastery.*

Exit ticket – students state what they accomplished and what worked best.

Study Skills: *Skills implemented by students – note-taking, summarizing, teamwork, etc.*

Note-taking, summarizing, outlining, reading comprehension, teamwork, oral communication, problem-solving.

SPED & 504 Accommodations / Modifications: *Codes.*

Per Individualized Education Plan (IEP) / 504 plan.

ELL Accommodations: *Codes.*

Clarify directions (CD); Extra time (ET); Peer and Native Language Support (PN); Pre-teach vocabulary (PV); Rephrase, Repeat, Slow Down (RS); Visual Cues (VC); Wait time (WT); Pictorial Representation (DP).
