

The Ten Scenarios

You will be assigned **one** scenario. You work it over **two class days**: Day 1 you take it apart, Day 2 you decide and defend. Everything is on this packet.

#	SCENARIO
1	Parts out of tolerance A run of 500 brackets comes off the line. Spot-checks show 1 in 20 is 0.8 mm over the allowed tolerance. The customer needs them Friday.
2	The line goes down A press jams twice in one shift. Restarting it takes 40 minutes each time. The operator says he can 'baby it' through the week.
3	Wrong material The steel that arrived is a lower grade than the drawing specifies. It looks identical. Nobody outside the shop would know.
4	Rework or scrap 200 finished parts have a cosmetic flaw. Reworking them costs 3 days of labor. Scrapping them costs the material.
5	The measuring tool is off A caliper used all week reads 0.15 mm low. Every part measured with it passed inspection.
6	Speed vs safety A guard on a machine slows loading down. Removing it would raise output by 15%. Two operators want it off.
7	A better process nobody uses A new fixture would cut setup time in half, but the crew is used to the old way and resists it.
8	The order changed late The customer changes a dimension after 60% of the run is finished. They expect the original delivery date.
9	Two suppliers, one price Supplier A is cheaper but has been late twice. Supplier B is 12% more and has never missed.
10	Who signs off An inspector is asked to approve a lot he did not personally check because the shift is ending.

Take It Apart

Name _____ Scenario # _____ Date _____

Bell work — first 10 minutes

A part comes off the line slightly out of spec, but it still fits. Should it ship? Explain.

Format: It ____ ship, because _____. It would depend on _____.

1 Say the problem in one sentence

Not the story — the actual problem that has to be solved.

2 Who is affected, and how?

WHO	WHAT IT COSTS THEM
_____	_____
_____	_____
_____	_____

3 What do you still need to know?

Three questions you would have to answer before deciding anything.

4 What is the real pressure here?

Money, time, a person, a reputation — name it.

Decide and Defend

Name _____ Scenario # _____ Date _____

Bell work — first 10 minutes

Who pays when a bad part reaches the customer — the operator, the inspector, or the company? Explain.

Format: _____ pays, because _____. But _____ also carries part of it.

5 Three options you could take

OPTION	WHAT IT COSTS
A. _____	_____
B. _____	_____
C. _____	_____

6 Your call — circle one: A B C

Three reasons, tied to the facts of your scenario, not to how you feel.

7 What would have prevented this in the first place?

60-second report out

Be ready to say: the problem in one sentence, your call, and your strongest reason. The class gets one question.
